According to my research, The Ya-hoo man: Speedrunner Mario can not achieve **hyperspeed**.

But in order to achieve that, mario should achieve speed at least of  $0.9997c$  which is a lot for little mario.

And due to following equation:

$$E = mc^2$$

you might get seizures when you reach that speed.

*StarFox = HI - YA*

$$StarFox = HI - YA = EKU - YAH - DAY - COMMON \quad (1)$$

So what i want to say is *OPEN THE DOOR NOW*
